## **DETAILED ACTION**

1. This action is in response to the notice of appeal filed on 12-07-2005

## Examiner's Amendment

- 2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
- 3. Authorization for this examiner's amendment was given in a telephone interview with Mr. JAMES M. SLATTERY on January 17, 2006
- 4. The application has been amended as follows:

Please replace claim 6 with the following:

6. (Currently Amended) An active noise control system comprising:

a microphone positioned in the passenger compartment of a vehicle having a fixed roof, the microphone being centrally located on the fixed roof of the vehicle at an antinode of a primary or secondary acoustic normal mode of the passenger compartment of the vehicle for detecting said noise of which sound pressure level is high and for generating an output signal;

canceling sound generating means disposed in the passenger compartment for generating a noise canceling sound;

a feedback control circuit for being supplied with an output the output signal from said microphone highly correlated to noise from a noise source and generating a noise cancellation signal which is out of phase to noise in the passenger compartment of the

vehicle with the fixed roof for energizing and generating an output signal to energize said canceling sound generating means; and

a storage box,

wherein said microphone and said feedback control circuit are housed together in said storage box, said feedback control circuit having an adjusting circuit for adjusting the amplitude and phase between a canceling the canceling sound generating means and the microphone, based on a transfer characteristic from said microphone, to generate a noise cancellation signal which is of the same sound pressure as, but out of phase to, noise at the microphone.
